

Joplin

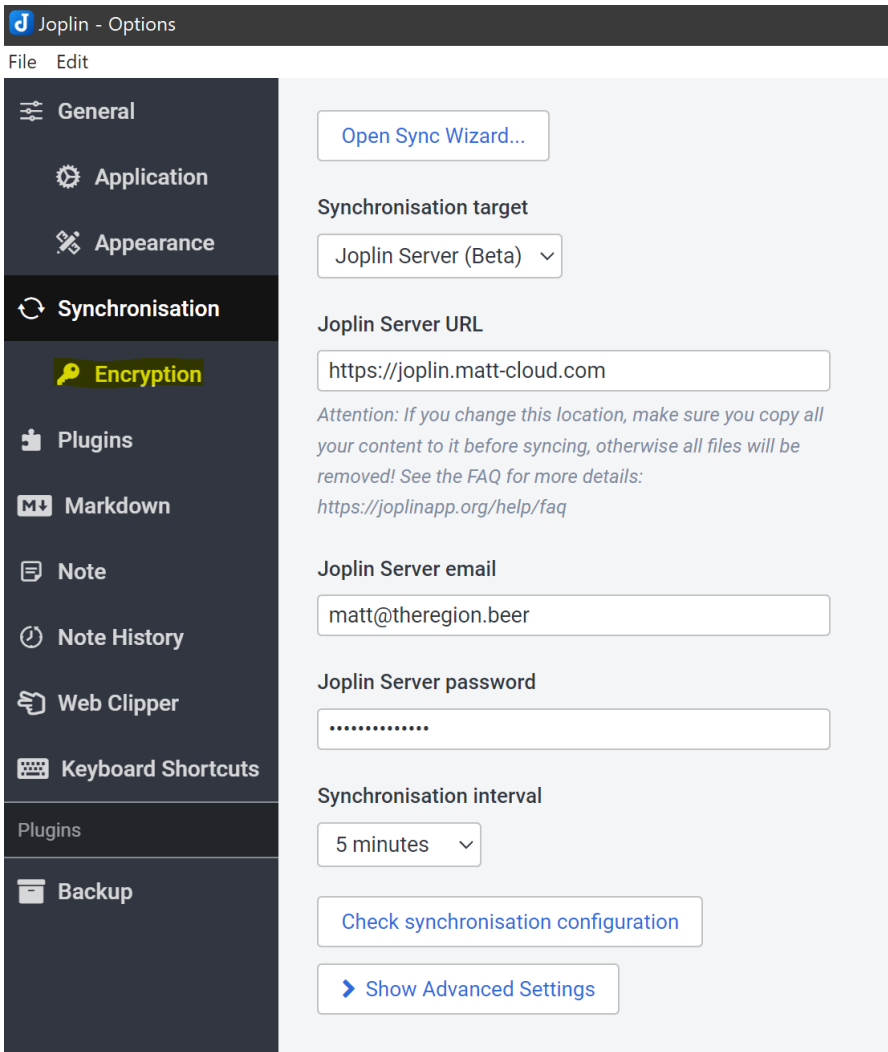

Joplin is an Evernote clone that requires a companion app. The companion apps can be found on Joplin's website. The app doesn't actually require using my cloud services, but the app can sync with my cloud. Make sure you delete the **Welcome!** notebook before logging in or you will have the repeating **Welcome!** notes you see in my screenshot below. The Matt-Cloud website for Joplin is just for account maintenance. You login for the first time here using your email and Matt-Cloud password. Joplin does have end-to-end encryption support to ensure your notes are safe. My server instance is running in a pair of docker containers, and I tested creating a note on my laptop, syncing with the server. destroying the containers and re-creating them, and then installing and logging in on my terminal server and the notes showed up. If anyone would find this useful in any way, it is now a thing I have available on Matt-Cloud.

Matt-Cloud Login Page

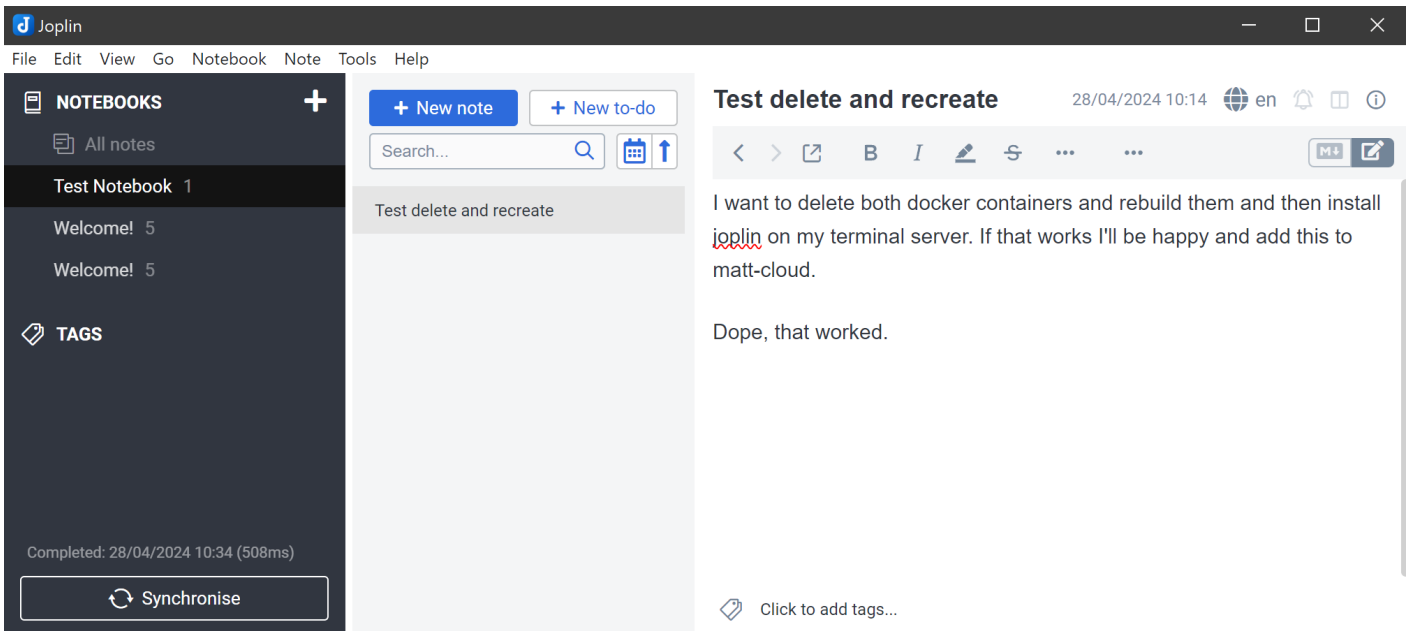

The screenshot shows a web browser window with the address bar displaying 'joplin.matt-cloud.com/login'. The page content includes the Joplin logo and the text 'Joplin Server'. Below this is a heading 'Login to Joplin Server' followed by the instruction 'Please input your details to login to Joplin Server'. There are two input fields: one for 'Email' and one for 'Password'. A link for 'I forgot my password' is located below the password field. A green 'Login' button is positioned below the input fields. At the bottom of the page, the footer text reads 'Joplin Server v2.14.2, copyright © 2021-2024 JOPLIN.'

Here's the sync settings in the app. The encryption settings are right next to it too.
