

Matt-Cloud 2FA

It occurs to me that a guide on setting up your 2FA on Matt-Cloud might be welcome. If you go to <https://auth.matt-cloud.com> you should see the following screen. You will need to click on Register Device, and you can follow all the prompts on the screen.

Authelia 2FA Setup Screen

Before you can add Matt-Cloud to your google authenticator, Authelia will have to verify your email. Authelia will request to validate your email address any time you do anything interesting with your account. There is a moderate likelihood of these emails being intercepted by spam, so check there if it hasn't arrived quickly. It isn't that my email server is particularly fast, it is just isn't particularly busy so it handles things quickly. The rest of the steps on the screen are pretty well documented by Authelia itself as you proceed through the process.
